Technical Skills

Languages & Libraries: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (MySQL, MySQL Workbench)
Tools & Infrastructure: Advanced Excel (Pivot Tables, XLOOKUP), AWS, Power BI, Tableau, Git, GitHub
Data Science & ML: Linear Regression, Cost Functions, Gradient Descent, Statistical Modeling
Core Concepts: Data Cleaning, Exploratory Data Analysis (EDA), Data Visualization, ETL Processing

Experience

Imarticus Learning

Data Analysis Intern

Bengaluru, India

May 2026 – June 2026

- Developed interactive **Power BI dashboards** for sales analysis, optimizing reporting workflows and isolating major regional revenue drivers.
- Executed automated data cleansing and **Exploratory Data Analysis (EDA)** using SQL and Python to extract clean behavioral attributes from raw datasets.
- Built predictive baseline workflows using **Logistic Regression and Random Forest** to identify core factors behind shifting user trends.

Projects

E-Commerce Customer Satisfaction System (Olist Dataset) | *Python, Pandas, Random Forest, SMOTE*

Jan 2026

- Engineered a predictive classification pipeline integrating **20,000+ relational consumer records** across orders, payments, and review datasets.
- Executed critical **Feature Engineering**, deriving business-centric variables including delivery time, expected delivery windows, and cost-per-installment metrics.
- Resolved severe class imbalance bottlenecks by implementing **SMOTE**, avoiding model bias toward the majority class of satisfied consumers.
- Trained and evaluated Logistic Regression and **Random Forest Classifiers**, mapping a binary satisfaction matrix with a peak evaluation accuracy of **66.5%**.
- Conducted deep visual EDA using Seaborn, discovering that a drop from early delivery to high shipping delay sliced review metrics from **4.2 down to 1.7**.

Danny's Diner: Relational Database & Loyalty Insights Analysis | *MySQL, MySQL Workbench*

Nov 2025

- Formulated complex SQL queries utilizing **Window Functions** (`DENSE_RANK()`, `RANK()`) and **CTEs** to analyze multi-table restaurant schemas.
- Designed scalable conditional statements using **CASE WHEN** logic to construct a simulated points-based loyalty and customer reward system.
- Extracted key operational metrics including top spenders, visit frequencies, and item popularity to provide data-driven inventory optimizations.

Education

Christ University

Master of Science (M.Sc.) in Data Science

Bengaluru, India

Expected May 2028

- Core Coursework:** Design and Analysis of Algorithms (DAA), Inferential Statistics, Linear Algebra, Probability & Distributions, Cloud Computing, Full-Stack Development Foundations.

Vijaya College

Bachelor of Science (B.Sc.) in Computer Science & Statistics

Bengaluru, India

Graduated May 2026

- Academic Standing:** Secured an overall CGPA of **8.6/10.0** (*Graduated with First Class Exemplary distinction*).

Certifications & Leadership

Machine Learning Specialization – Stanford University & DeepLearning.AI (Instructor: Andrew Ng)

Google Data Analytics Professional Certificate – Coursera

Advanced Data Science Training Certification – Besant Technologies

Organizing Team – CCA Club, Christ University (Led technical workshops and managed student initiatives)
